

Lion Country Safari Habitats 2 Creative Activity

The Ice Age is an example of a dramatic change in climate that affected both habitats and the animals that lived there. Using what you have learned about habitats and biomes, pick an extreme change in climate and focus on a specific habitat and an animal that lives there. Create a scene of that habitat with your animal and show how your climate change has affected both.

Climate Change: _____

Habitat: _____

Animal: _____

Describe how your new habitat still provides food, water, shelter, and space for your chosen animal.
