

## **Habitat Vol. II Post-Visit Activity**

Plants and animals in each habitat depend on each other as well as the right combination of temperature and humidity in order to survive. Discuss these situations with your class.

1. If trees are cut down in a rainforest, what will happen to the animals that live there?
2. If there is a drought, how will that affect the plants and animals in that habitat?
3. What do you think might happen if the temperature in an environment changes drastically (such as a normally warm place becoming cold)?
4. Name some ways that you learned, on your visit to Lion Country Safari, that you can help the environment.
